

What is claimed is:

1. A method of attaching articles of clothing to one another wherein each article has a cut/hole located near the open end of the article, the method comprising the steps of:

inserting (slipping in) a first side of the first article through the cut/hole of the second article;

pulling out said first side of said first article through the second side of said second article; and

pulling out said second side of said second article through the first side of said first article.

2. The method of claim 1, wherein said first article is a first sock of a matched pair of socks and said second article is a second sock of said matched pair of socks.

3. The method of claim 1, wherein the cut/hole of the socks has a circular shape.

4. The method of claim 1, wherein the cut/hole of the socks has a rectangular shape.

5. A set of pair of socks having cut/holes located near the open end of each sock wherein the cuts/holes enable to attach the socks to one another by inserting (slipping in) each closed end of each sock through the cut/hole of the other sock and pulling out the closed ends of the socks.
